School districts across the country are facing conflicting demands: to improve student outcomes and make do with limited dollars. The fiscal realities are sobering, especially given the need to implement the new standards and tests, develop more accurate evaluation and feedback systems, and provide more relevant professional support, among other priorities. With the support of the Bill & Melinda Foundation, the Government Finance Officers Association has developed two new, free sets of resources to help districts address these challenges. Smarter School Spending for Student Success is a new way of aligning resources (people, time, and money) with instructional priorities for improving student achievement. Budgeting Best Practices provide deep guidance to districts on how districts to more effectively link student outcomes to spending choices; districts that use these practices will be eligible for GFOA's highly desired budget recognition awards. Through hands-on exercises, participants will learn how these new resources help districts use cost effectiveness considerations, despite limitations of data, analytical capacity and support for change. The resources are free of charge on public websites, and participants can use them to support their work with school districts.

A new class of financial tools is being developed to promote human capital investments that benefit society. Join us to learn how Pay for Success, Social Impact Bonds, and Performance-Based Funding can be used to support promising educational interventions, with the expectation that investors will eventually be repaid if negotiated performance targets are met. Presenters have first-hand, practical experience working with governments, social service providers, funders, and other stakeholders to raise and deploy private sector resources to support proven educational reforms.

TIM RUDD, MDRC. Using Social Impact Bonds to Spur Innovation, Knowledge-Building, and Accountability

LAURA RASMUSSEN FOSTER, RTI International. Technical Assistance to States on Performance-Based Funding.

The session will be moderated by Steven Klein, Center Director for Career and Adult Education and Workforce Development at RTI International. Dr. Klein specializes in the design of education accountability and finance systems, policy analysis and research, and the evaluation of federal and state career education and pathways initiatives.

Participants will understand what a social impact bond is and how it can be used to expand the pool of available resources in a time of extreme budget constraints. Lessons learned also will be shared from panelists’ experience working with state educational systems to design and implement PBF systems for adult education and career and technical education. Panelists will discuss implications for PBF implementation in other educational settings and considerations for federal legislation, drawing on their expertise in establishing financing vehicles, understanding how funds could be allocated to improve program or school performance, and developing funding formulas.

**5.02 - California’s Policy U-Turn: Local Control or State Abdication?**

**Room:** Jefferson

**Chair:** JENNIFER IMAZEKI, San Diego State University

After several years of fiscal crisis and policy stagnation California has taken a sharp turn in a radically new direction. In June 2013 the California Legislature adopted the Local Control Funding Formula (LCFF), which dramatically changed both the way that California schools are funded and the ways in which schools and school districts are held accountable. The state’s previous finance policy relied on a complex and irrational combination of historically arbitrary operating grants with dozens of categorical funding streams. In stark contrast, the LCFF is a weighted pupil formula that provides additional resources to schools and districts based on their enrollment of English learners, foster youth, and students living in poverty. The LCFF also requires schools and school districts to prepare Local Control Accountability Plans (LCAPs), which present local strategies for progress toward eight state “priorities,” and tie district budgets directly to the implementation of those strategies. When it comes to the distribution of resources the LCFF looks very much like weighted pupil funding policies in many other states, but on accountability policy the LCAP represents a sharp and genuinely radical break with prevailing strategies for driving improvement in schools at both national and state levels.

Together the LCFF and the LCAPs mark a sweeping shift in policy regimes, moving California from a system in which regulatory authority and control of resources was highly centralized toward one in which authority and responsibility will mainly reside at the local level. Educators at all levels of the system consequently find themselves in a situation of almost limitless potential, where the virtual absence of clear guidance or effective
instruments of state control leave them free to develop their own strategies to improve the performance of local schools and students. At the same time, the new system requires local educators to make sense of a newly decentralized and profoundly uncertain policy environment with few rules, minimal guidance, and limited information about what might work, where to turn for assistance, or what the consequences for success or failure might be. Local educators are being called upon to innovate, experiment, and improvise in ways that few of them have ever done before, and to develop manageable and sustainable plans and strategies in consultation with teachers, parents, and communities to guide change in their districts and schools.

**Room:** Truman

**Chair:** SOUNG BAE, Stanford University

While for-profit colleges and universities have been around since the 18th century, research and policy interest in them ebbs and flows and is almost always significantly less their non-profit and public counterparts. Over the past decade, interest in the for-profit sector has grown rapidly, likely due to their skyrocketing enrollment through the Great Recession, increasing use of federal financial aid dollars, and growing student default rates. At their recent peak, for-profit colleges and universities enrolled approximately 13% of all postsecondary students in the U.S.

**Room:** Coolidge  
**Chair:** SUSAN DYNARSKI, University of Michigan  
There is a long-standing tradition of ranking colleges based on the research productivity of their faculty, their admissions selectivity and the academic achievement of their incoming students. The widely-followed US News and World Report Rankings heavily weights these factors, for example. A proposed federal policy expands the scope of college ratings, in two ways. First, the proposed ratings would focus on metrics given little to no weight in current ranking schemes: graduation rates and tuition prices. Second, it is the federal government, rather than a private organization, that has proposed this system of college ratings, with the suggestion that the ratings be used to determine the distribution of federal funds to colleges. This roundtable will discuss this new policy initiative and the substantive questions it has raised among policy analysts. For example, should a college’s graduation rates be adjusted for the academic preparation of incoming students? How should the outcomes of students who attend multiple schools be treated in the calculations of each school’s ratings? The roundtable will draw parallels with the performance rating of elementary and secondary schools under No Child Left Behind, extracting lessons from that experience for the current policy discussion.

7.12 - Using the What Works Clearinghouse to Inform Research and Practice

Room: Wilson C

Chair: JILL CONSTANTINE, Mathematica Policy Research

The What Works Clearinghouse (WWC) was established in 2002 as an initiative of the Institute of Education Sciences (IES) at the U.S. Department of Education. The goal of the WWC is to be a resource for informed education decision making. For more than a decade, the WWC has been a central and trusted source of scientific evidence for what works in education to improve student outcomes. What does that mean?

- Central. We want to be the place people turn to find out about education research. We have reviewed thousands of studies on hundreds of education programs, products, practices, and policies.
- Trusted. We strive to provide accurate information on education research. All of our procedures and policies are publicly available, and our goal is to provide transparent reviews of the research literature.
- Scientific evidence. In order to provide information on what works, we conduct thorough reviews of the research literature and critically assess the evidence presented.

This session presents the ways in which the WWC can be a resource for researchers designing and conducting rigorous studies and practitioners looking for evidence-based interventions to use in their classrooms and schools.

Standards undergird everything in our educational system - what teachers teach, what standardized exams assess, how teachers are evaluated, how prospective teachers are trained, etc. While much ink has been spilled on the pedagogical implications of new standards and the internecine political drama surrounding their rollout, less work has been done on the issues policy surrounding the implementation of new standards and what the political landscape means for the Common Core moving forward. In this session, we will dig into this issue as we discuss the politics and policies of the Common Core State Standards (CCSS).

The idea behind the CCSS is simple enough – all American students should have a set of common learning expectations. By 2011, 46 states and the District of Columbia adopted the standards. As states began to roll out the standards, however, they were met with increasing opposition from both sides of the political spectrum. As of 2014, three states have already dropped the standards and several more are contemplating similar measures.

Since the standards were adopted several years ago, states have run into numerous roadblocks. One set of these challenges have been political. First, elements on the political right pushed back against perceived federal overreach. Then, as standards were more tightly integrated with the tests that undergird teacher evaluation and school accountability systems, elements of the political left voiced their concerns. Parents, activists, and politicians from across the political spectrum have coalesced around privacy and data usage concerns as well. Several states have also balked at the costs of upgrading technological infrastructure to align with expectations for administering computer-based Common Core tests.

But even these concerns obscure series implementation issues that face the Common Core moving forward. Numerous states are piloting new, Common Core-aligned assessments this year and the landscape of test providers is ever-evolving. What does this mean for comparability across states? What does it mean for the cross-state marketplace for instructional materials that the Common Core was supposed to create? What does it mean for pedagogical innovation and experimentation? When these new tests become fully integrated with teacher evaluation and school accountability systems, questions surrounding alignment with existing longitudinal data systems and existing definitions of teacher and school quality will move to the forefront. These new expectations will intersect with school choice as well, as comparisons between sectors (charter, traditional public, magnet, private, etc.) will be driven, for better or worse, by these new standards and exams.

This panel will address five primary questions as they relate to the Common Core: (1) What is the state of play for Common Core implementation? (2) What are the political fault lines? (3) How has the Common Core intersected with current education reform efforts? (4) How will the Common Core intersect with education reform efforts moving forward? And (5) What further research should be conducted to inform future discussions about both the Common Core and learning standards writ large?

A research consortium of Tulane University and local stakeholders of New Orleans to understand the effects of post-Katrina school reforms and improve schools for all New Orleans students.

Our upcoming conference: The Urban Education Future? Lessons from New Orleans 10 Years after Hurricane Katrina will bring together researchers, educators, policy leaders, parents, and advocates to examine research about school reforms in the post-Katrina years.

June 18-20, 2015
New Orleans, LA

Topics of research include:

- School choice
- Charter schools
- Test-based accountability
- Student achievement
- Student mobility and equity
- Teacher pay and turnover
- School governance

The Association for Education Finance and Policy’s journal, Education Finance and Policy (EFP), is now in its tenth year. Published by The MIT Press, EFP examines how resources can be justly generated and productively engaged to enhance human learning at all levels. EFP is a quarterly publication connecting individuals who conduct research with those who are responsible for education finance-related professional activities, developing policy, institutional management, and government operation.

Forthcoming Articles

The NYU Steinhardt School of Culture, Education, and Human Development congratulates AEFP and its members on their 40th annual conference this year.

Last fall, NYU Steinhardt welcomed AEFP President Dominic Brewer as our new dean, and he is now the third member of our faculty to serve as president in the past fifteen years. We are pleased to share a strong affiliation with AEFP, and the subject of this year’s conference, “Research Informing Practice, Practice Informing Research,” is a topic integral to our mission. We commend all of this year’s participants on your important work.

NYU Steinhardt prepares students for careers in the arts, education, media, health, and psychology. It is committed to public service, global collaboration, research, scholarship, and practice.
